

MONASH University  
e-Research Centre

# e-XPO Exhibition & Demonstrations

“Technological innovation transforming research”  
**25-27 August, 2010**

**Time: 9am-5pm**

**Venue: Atrium, Bldg 75,  
Clayton Campus**

The large data sets being produced and the increased processing power available through local and global compute facilities are enabling the development of new research methods that reveal new understanding and which have been transformational for research. Techniques have evolved for effective data management, such as the new TARDIS/MyTARDIS. Remote computation and the operation of remote instruments have dramatically increased the options for researchers and there have been significant advances in visualisation techniques. New collaboration technologies have enabled remote teams to work together in ways that were not previously possible.

\*Staff will highlight a range of innovative tools for large-scale global collaborative research - as well as for smaller/niche research - providing personal advice and demonstrations...This event is not to be missed.
