Ms Michele Havlik, Mr Shane Maiolo (Multimedia Development), Ass Prof Yoni Ryan (Educational Design), Mr Rob Pignolet, Mr Mark Warren, Mr Robert Iurato (Audiovisual Production), Mr Jeffrey Bender (Project manager)

**Centre for Learning and Teaching Support,
Monash University.**

Project funded by:

Melbourne Monash Project Grant for Collaboration in
Education Technologies

Healthcare Scenarios in Developmental Disability Medicine

The CDDHV

- Academic unit within the Faculty of Medicine, Monash University & University of Melbourne
- Aims to improve health outcomes for people with developmental disabilities through teaching, research & clinical activities.
- Offers curriculum components at most year levels at both Monash University & University of Melbourne
- **Teaches every medical student in the state**

*We know that people with disabilities
are powerful teachers.*

Healthcare Scenarios in Developmental Disability Medicine

Communication skills teaching

- In year 4 of 5 year course
- Tutors with developmental disabilities work with students with support of CDDHV tutors
- Evaluated positively by students

Healthcare Scenarios in Developmental Disability Medicine

In their evaluations session students said...

"I previously knew nothing about intellectual disability & how to work with someone who has one - I felt I learnt a lot."

"..the first time I have been aware of the spectrum of communication differences and how I have to tailor my communication to best fit the patient"

"a wonderful opportunity to deal with people with disabilities who were willing to help us become more understanding doctors as well as people."

*We wanted to provide each student with the chance to ‘meet’
people with disabilities*

*and so to have a personal context for their learning about
Developmental Disability Medicine.*

Healthcare Scenarios in Developmental Disability Medicine

Through meeting **Jacqui** students are introduced to an *Overview of Developmental Disabilities*.

Four people with developmental disabilities form the heart of the product. Students 'meet' each person through the clinical scenario, an interview and personal images.

Through meeting **Sara** students learn about *Issues in Communication*.

Through meeting **Colin** students learn about some *General Issues in Health Care*.

Through meeting **Geoff** students learn about *Mental Health and Illness* in people with developmental disabilities.

So now let me show you what we've done
